Include only plots no house should be addressed for now

Update your `/src/data/listings.json` as below to **exclude houses and have only plot listings**:

```
[
  {
    "id": 1,
    "name": "Plot near Holy Govardhan Road",
    "description": "Affordable plot available for immediate possession.",
    "price": "INR 10 Lakhs",
    "image": "/default1.jpg"
  },
  {
    "id": 2,
    "name": "Premium Plot on Barsana Main Highway",
    "description": "Prime location, perfect for investment or building a new home.",
    "price": "INR 18 Lakhs",
    "image": "/default2.jpg"
  }
]
```

Action Steps:

- Remove any residential house properties from your JSON.

- Keep only *land/plot* entries as shown.

Your site will now show only plots, no houses.
Do you want additional plot details, map integration, price filters, or something else before deployment?
